

## Programming Exercise #6b: Creating Functions

Design a program that demonstrates your ability to create original functions. It must meet the following criteria:

- You must create at least two original functions in the program
  - One function must perform at least one calculation and return a value
  - One function must not return any value but instead print something to terminal

If you want an example to look at, download Programming Exercise 6a.

Once you have it successfully running, email Mr. Z the program.
